Create a Session with GoToMeeting Desktop

1. Once your software is available for use on your computer, find GoToMeeting and open it.

Your software will open on this page, where you can begin to schedule future meetings or create an instant meeting:

2. When you schedule a meeting, you will notice it contains the same format as the Desktop version, where you can schedule a date and time, name the meeting, and have the option to make it password protected.
