Getting started...

**Note:** If working off-campus, you must first set preferences in Google Scholar to view holdings with Duquesne University. Instructions can be found [here](#).

You may search by topic, article title or author name. To search for an author, click the drop down arrow to complete an advanced search.

Enter the author name and click the search icon.

**Note:** Google scholar searches for articles, books, theses, and abstracts published within such sources as court opinions, academic publishers, professional societies, online repositories, universities, and websites.
Navigating Search Results

Beneath each result, Google Scholar displays the number of citing articles. Click Cited by # to view a list of all citing articles within Google Scholar.

Publish or Perish

Publisher or Perish, a software program developed by Anne-Wil Harzing, uses Google Scholar to retrieve and analyze academic citations. The software, using raw citations, presents statistics on:

- Total number of papers
- Total number of citations
- Average number of citations per paper
- Average number of citations per author
- Average number of papers per author
- Average number of citations per year
- Hirsch’s h-index and related parameters
- Egghe’s g-index
- The contemporary h-index
- The age-weighted citation rate
- Two variations of individual h-indices
- An analysis of the number of authors per paper

Visit Publish or Perish for further information and to install the software program.
